

FIX ONE

STRONG RIGHT HAND

Golfers who slice the ball often have a weak grip. Strengthen the grip by rotating the hands anti-clockwise on the grip so that you see three knuckles of the left hand and the right sits more underneath the grip. To check, pop a tee peg between the Vs of both hands - they should point slightly to the right.

FIX TWO

INSIDE ATTACK

The left-to-right slice shape is usually the result of an out-to-in swing path. To retrain your swing to attack the ball more from an inside path, place a tee peg on the ground as your target line (as if at 6 o'clock) and another pointing to an imaginary 7 o'clock position. Follow the inside peg in to strike the shot.

4 FIXES TO CURE A SLICE

FIX THREE

HALFWAY BACK

The second common mistake slicers make is to rotate the clubface open excessively in the takeaway. That means by the halfway back position the clubface is open. Counter this by focusing on keeping the clubface square or slightly closed at this point. Again, a tee peg in the grip can help indicate the clubface angle.

FIX FOUR

ROLL & RELEASE

The final key to eradicating your slice is to let the forearms rotate into the throughswing so that the club releases rather than staying open as it strikes the shot. Leave the two tee pegs from Fix One in your grip and get them to point down at the ground as you swing through to guarantee rotation.
